

In case of finding phytosanitary quarantine objects, the General Inspectorate of Phytosanitary Supervision and Seeds Control will take the following measures:

- a) phytosanitary treatment by using methods to ensure the disinfection of the load;
- b) separation of the contaminated parts of the load from the non-infected ones, by fully destroying the quarantine objects;
- c) phytosanitary supervision of the entrance permit of the load, in view of transmitting it to be processed, so that the full destruction of quarantine objects is achieved;
- d) the full destruction of the load, by methods which ensure the total elimination of the load.
